École polytechnique engineering student on a double degree in Naval Architecture at KTH, specialized in mechanics of materials and structures. Experience in applied research on composites, in industry and abroad; I enjoy getting up to speed quickly on new subjects and linking technical analysis to the wider stakes of a project.

Education

KTH Royal Institute of Technology <i>Master of Science in Engineering – Naval Architecture (double degree)</i>	<i>Stockholm, Sweden</i> <i>Aug 2026 – Dec 2027</i>
◦ Coursework: marine structures, ship design, fatigue of welded structures, lightweight structures and FEM, fibre composites, marine hydromechanics	
◦ Conceptual design of a ro-ro cargo ship (Lake Vänern – Ruhr) – master's thesis in autumn 2027	
École polytechnique, IP Paris <i>Ingénieur polytechnicien (MSc-level engineering degree)</i>	<i>Palaiseau, France</i> <i>Sept 2023 – present</i>
◦ Specialization in mechanics of materials and structures (3rd year) – 4th year at KTH	
Lycée privé Sainte-Geneviève <i>Classes préparatoires – intensive maths, physics and CS programme</i>	<i>Versailles, France</i> <i>Sept 2021 – July 2023</i>

Experience

Institut de Recherche Dupuy de Lôme (IRDL) – Research internship <i>DEMAT team (behaviour and durability of materials)</i>	<i>Lorient, France</i> <i>Mar 2026 – July 2026</i>
◦ Implemented Bloch–Floquet boundary conditions in Abaqus (Python scripting) to predict the compressive strength (fibre microbuckling) of unidirectional carbon laminates representative of racing-yacht hydrofoils	
◦ Led the topic autonomously (literature review, choice of method, validation against earlier numerical results obtained with other methods) – tool integrated into the team's workflow	
Deutsche Telekom Technik – Internship <i>Digital Transformation team – Fiber Factory</i>	<i>Bonn, Germany</i> <i>June 2025 – Sept 2025</i>
◦ Contributed to digital transformation and process improvement projects; wrote an internal playbook for the team	
◦ Daily work in a fully German-speaking environment within an international group	
Gendarmerie officer – Military and leadership training <i>Gendarmerie nationale – Officer training at AMGN (Melun)</i>	<i>Guingamp, France</i> <i>Oct 2023 – Apr 2024</i>
◦ Took part in public-safety missions: patrols, investigations, crowd control	
◦ Followed the command staff during sensitive events; rigour and communication under pressure	

Other experience and projects

Assistant scout leader <i>Scouts unitaires de France – Sea scouts</i>	<i>Paris, France</i> <i>2023 – present</i>
◦ Leading a group of 20 teenagers – two two-week summer camps including 4–5 days of sailing – troop first-aider (PSC1)	
Modelling and programming projects <i>École polytechnique</i>	<i>Sept 2024 – Mar 2026</i>
◦ Sailboat rig: analytical calculations and finite elements in Cast3M (buckling, fatigue, natural modes)	
◦ Iceberg/Titanic impact simulation: finite element model of the riveted hull in Python/FEniCS	
◦ Quantum computing: graph isomorphism problem via adiabatic quantum computation (Qiskit)	
◦ Web application (HTML, CSS, JavaScript, PHP, SQL) and a 3D version of the game TRON in C++	

Skills

Languages: French (native), German (C1), English (C1+, Linguaskill), Swedish (beginner)	
Programming: Python, MATLAB, C++, Java, OCaml, HTML/CSS/JavaScript, SQL/PHP, L ^A T _E X	Sim-
ulation: Abaqus, Cast3M, FEniCS, Qiskit	
Interests: goalkeeper (university football team); head of communications and singer – <i>Ensemble vocal de l'École polytechnique</i> ; organ (8 years, incl. 3 at a conservatoire) and piano
